**SUMMARY OF THE NEW CONCLUSIONS**
**OF THE DOCTORAL DISSERTATION**

**1. Dissertation title**: The publishing of local education materials in Vietnam at present

**2. Field of study**: Publishing

**3. Code:** 9 32 04 01

**4. Doctoral candidate**: Tran Tho Xuong

**5. Supervisors:** 1. Assoc. Prof. Dr. Vu Trong Lam 2. Dr. Vu Thuy Duong

**6. Training institution:** Academy of Journalism and Communication

**7. New conclusions of the dissertation:**

*First*, the dissertation establishes an approach to the publishing of local education materials (LEM) from the perspective of publishing studies, while distinguishing three interrelated but distinct dimensions: the quality of publishing, the quality of the materials, and the effectiveness of their use.

*Second*, the dissertation develops an analytical framework for the publishing of LEM, covering the major stages of planning and manuscript organization; compilation, editing, and manuscript finalization; printing and distribution; and post-publication activities. It also specifies a set of criteria for investigation and evaluation.

*Third*, the research findings indicate that the quality of the publishing of LEM is associated with the interconnectedness among different stages and with the coordination and clear delineation of responsibilities among stakeholders. In particular, the collection and verification of source materials and copyright control need to be maintained throughout the publishing process.

*Fourth*, the research findings indicate that the quality of the different stages of the publishing process, the quality of LEM, and the effectiveness of their use are interrelated. Certain dimensions exhibit positive correlations, providing an empirical basis for improving the quality of the publishing of LEM.

*Fifth*, the dissertation establishes a comprehensive and focused system of solutions for improving the quality of the publishing of LEM, taking into account levels of priority, feasibility, and implementation roadmaps. Within this framework, digital transformation and the application of technology are implemented in accordance with the conditions, resources, and capacities of each locality.
